# Xpaper™

digital writing system

*Imagine what digital writing  
could do for your business!*

*Easily turn contracts, forms, and handwritten notes into digital files.*

- **no more faxing!**
- **no more scanning!**
- **no more sending overnight letters!**
- **do it all from your PC!**

Xpaper simplifies your life by letting you automatically create digital copies of your work as you write. The key is Xpaper's unique pattern of precisely printed dots.

Xpaper's dot pattern is recognized by a miniature camera inside the Logitech IO2 digital pen, included in the digital writing system. First you can print a document from any Windows application on the digital writing paper. As you write notes and signatures on the document, the pen records every stroke of your handwriting. When the pen is placed into its cradle, Xpaper software retrieves your writing and automatically creates a copy of the physical paper document, complete with your handwriting!

## how it works:

Now in a convenient PDF format, the document can easily be saved, emailed, or imported into any information system – saving you time and money!

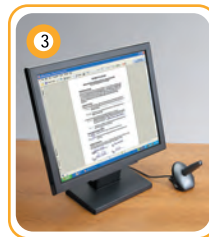

### 1 PRINT.

Print your document on Xpaper.

### 2 WRITE.

Write on the document with your digital pen.

### 3 GO!

Download your pen to get a copy of the document, including your handwriting!
